

# HOW DO CYBER SCAMS TRICK US?

**Social engineering** is a sneaky trick where criminals try to fool you into giving away personal information. Instead of hacking computers, they manipulate people into giving them what they want.

## SO, HOW DOES

## **SOCIAL ENGINEERING** WORK?

### A SOCIAL ENGINEER WILL:

# 1

**Do research** on you, your family, friends, home, where you work, and more – just by using what you post publicly, they create personalised scams

# 2

**Send you a message** that looks trustworthy, it might look like it came from a friend, a coworker, your boss, or even a ‘friendly’ stranger

# 3

**Trick you** into revealing sensitive info, like passwords or financial info. If you don’t comply, they might threaten to blackmail you.

# SO WHAT CAN YOU DO TO PROTECT YOURSELF?...

just assume that everything you post online will be seen by **everyone**

(yes, even if you changed the privacy settings)

## Are you revealing too much?

You know to keep passwords to yourself, but what else counts as 'sensitive info'?

## Maybe you've seen a post like this one...

## ... but did you notice?

this information also happens to be common security questions for online accounts — and that's no accident.

this type of info can be used to break into your online accounts by using the password reset or account recovery options

## Before you share, ask yourself:

- Who will see this post?
- What does this post reveal about me?
- Why does this info need to be shared?
