

Building an Article Title in L^AT_EX

Ian Affleck *

November 19, 2007

Abstract

This article has virtually no content, so the abstract is pretty short. I'll make it long enough that you can see how it fits in the margins.

1 First Section

There's not much in this section, but it's nice to see how the margins compare with those in the abstract.

2 Second Section

There's not much here either. By the way, if you change the document class to "report" instead of "article", then the title appears on its own page.

*Supported by the UCFV Math Club

***** Background LaTeX code *****

```
\documentclass[12pt]{article}
\usepackage{amsmath}

\begin{document}

\title{Building an Article Title in \LaTeX}

\author{
